SKILLS

- Python
- HTML
- Django
- Django Rest Framework
- SQL,Postgres
- Docker
- Django Tests
- Redis,RabbitMQ
- Digital Ocean,Gunicorn

EDUCATION

2024 - 2025

Najot ta'lim,in school

ABOUT ME

I'm junior backend developer with hands-on experience in building web applications using Python and Django. I enjoy writing clean, efficient code and learning new tools that improve development speed and performance. I'm always open to feedback, teamwork, and opportunities to create something meaningful through technology.

PORTFOLIO PROJECTS

- Offline Student Panel of Educations
- I developed a RESTful API similar to the Najot Ta'lim offline student panel. The system allows administrators, teachers, and students to manage educational data efficiently. It includes features such as student registration, attendance tracking, course and group management, payment history, and progress monitoring.
- Platform of E-Commerce

I built a RESTful API for an E-commerce platform that supports online shopping features such as product management, user authentication, shopping cart, orders, and payment processing. The system allows both customers and admins to interact seamlessly – customers can browse products, add them to their cart, and place orders, while admins can manage inventory, track sales, and update product information.
